

Miniproject 1: R

For miniproject 1, please select your favorite dataset from either Kaggle.com or UCI Machine Learning Datasets (<https://archive.ics.uci.edu/ml/index.php>).

Please write a 1-page description of the selected dataset and a list of 10 operations that you plan to perform with the dataset. The operations can include finding maximum, minimum, standard deviation, and average values, selecting and plotting subsets of data, checking for erroneous or missing values, etc. The more innovative the operations are, the better is the miniproject.

Then, write R scripts to carry out the operations that you include in your proposal.

Submit your script file and output file, along with the 1-page description.
